Minneapolis, MN | (763)-900-3044 | pranavsp108@gmail.com | LinkedIn | GitHub | Portfolio

EDUCATION

University of Minnesota Twin Cities Master of Science in Analytics — Minor in Business Management	<i>Sep 2024 – May 2026</i> 3.7 / 4.0
Visvesvaraya Technological University Bachelor of Engineering in Mechanical Engineering	<i>Sep 2017 – May 2021</i> 3.4 / 4.0

WORK EXPERIENCE

Daikin Applied Americas <i>Data Science and Optimization Intern</i>	<i>Minneapolis, U.S.</i> <i>Aug 2025 – Dec 2025</i>
- Identified \$1.5M+ in annual cost savings by analyzing 2,000+ product design and cost parameters and translating cost-performance tradeoffs into data-driven recommendations. - Built a Python, LightGBM, and Scikit-learn predictive framework to estimate scenario outcomes, reducing simulation runtime by 90% and enabling faster decision cycles. - Created validation workflows and stakeholder-ready analyses, saving 1,000+ engineering hours annually and shortening product development feedback loops.	

Tata Consultancy Services <i>Client: Pandora</i> <i>Data Scientist, Retail Analytics</i>	<i>Bangalore, India</i> <i>Feb 2022 – Jul 2024</i>
- Built automated Python and SQL analytics workflows for global retail operations (\$4.5B revenue), replacing 30+ manual reporting processes and enabling scalable customer, sales, and KPI analysis. - Developed data processing and validation workflows using Azure Logic Apps, Functions, and SQL, reducing processing workloads by 35% and improving data reliability for recurring business reviews. - Analyzed multi-terabyte customer, transaction, and sales datasets using advanced SQL to identify behavioral patterns, optimize KPI logic, and reduce executive dashboard response times by 40%. - Implemented anomaly detection and data quality checks across sales and reporting pipelines, improving reporting accuracy by 15% and mitigating \$50K+ in revenue leakage. - Built Power BI dashboards and model-driven KPI analyses for 50+ stakeholders, translating customer and operational signals into a 12% regional growth opportunity.	

University of Minnesota <i>Graduate Teaching Assistant</i>	<i>Minneapolis, U.S.</i> <i>Jan 2025 – May 2026</i>
- Supported Data Science and AI Hub coursework by guiding 230+ students and 20+ teams through EDA, statistical modeling, and applied AI capstone projects. - Co-designed assessments and provided technical consultation on Python, R, machine learning, and Responsible AI, achieving a 100% project completion rate.	

SKILLS

Programming:	Python, SQL, R, Pandas, NumPy, Git
Product Analytics:	KPI Design, Funnel Analysis, Cohort Retention, Customer Segmentation, Revenue Analytics, Data Storytelling
Experimentation:	A/B Testing, Experimental Design, Causal Inference, Hypothesis Testing, Bootstrap CIs, Regression Analysis
ML/AI:	Scikit-learn, Feature Engineering, Propensity Modeling, Recommendation Systems, RAG, OpenAI API
Data Platforms:	BigQuery, PySpark, Databricks, Streamlit, FAISS, Tableau, Power BI

PROJECT EXPERIENCE

E-Commerce Product Analytics, Experimentation & AI Copilot Platform	<i>Apr 2026 – May 2026</i>
- Built a BigQuery, Python, and Tableau product analytics platform to diagnose funnel drop-offs, segment customers, and measure campaign lift across 360K+ sessions and 270K+ users. - Added propensity modeling, A/B testing, and a RAG-based AI copilot, achieving 0.847 ROC-AUC, 15.8x PR-AUC lift, and interpretable KPI Q&A.	
Customer Reorder Behavior Modeling & Recommendation Analysis	<i>Jun 2025 – Aug 2025</i>
- Engineered user, product, temporal, and user-product features on 30M+ Instacart interactions using PySpark and Databricks for reorder behavior and next-basket prediction. - Trained reorder models achieving 0.830 ROC-AUC, 0.409 PR-AUC, and 58% Recall@10; applied FP-Growth for cross-sell and product-affinity insights.	
AI Workforce Impact Intelligence Platform	<i>Sep 2025 – May 2026</i>
- Built an NLP workforce intelligence platform analyzing 20K+ Reddit comments using PRAW, Sentence-Transformers, BERTopic, and Streamlit. - Designed weak-label taxonomies, occupation buckets, and severity scores, producing 45 interpretable topics and 0.848 ROC-AUC for high-engagement prediction.
