EDUCATION

University of Minnesota Twin Cities Master of Science in Analytics — Minor in Business Management	<i>Sep 2024 – May 2026</i> 3.7 / 4.0
Visvesvaraya Technological University Bachelor of Engineering in Mechanical Engineering	<i>Sep 2017 – May 2021</i> 3.4 / 4.0

WORK EXPERIENCE

Daikin Applied Americas <i>Data Science and Optimization Intern</i>	<i>Minneapolis, U.S.</i> <i>Aug 2025 – Dec 2025</i>
- Identified \$1.5M+ in annual manufacturing cost savings by analyzing 2,000+ design parameters and recommending optimal material configurations through data-driven tradeoff analysis. - Engineered a predictive optimization framework using Python, LightGBM, and Scikit-learn to model HVAC design outcomes, accelerating simulation runtime by 90%. - Built surrogate modeling and validation workflows to evaluate complex thermal scenarios, saving 1,000+ engineering hours annually and shortening the R&D feedback loop.	

Tata Consultancy Services <i>Client: Pandora</i> <i>Data Scientist, Retail Analytics</i>	<i>Bangalore, India</i> <i>Feb 2022 – Jul 2024</i>
- Built automated Python and SQL analytics workflows for global retail operations (\$4.5B revenue), replacing 30+ manual reporting processes and eliminating 1,000+ hours of effort. - Developed scalable data processing workflows using Azure Logic Apps, Functions, and SQL, reducing processing workloads by 35% and operational latency by 20%. - Analyzed multi-terabyte retail datasets using advanced SQL to model sales trends, optimize KPI logic, and reduce executive dashboard response times by 40%. - Implemented automated data validation and anomaly detection checks across sales pipelines, improving reporting accuracy by 15% and mitigating \$50K+ in revenue leakage. - Designed Power BI dashboards and KPI analyses for 50+ stakeholders, translating operational data into insights that uncovered a 12% growth opportunity in regional markets.	

University of Minnesota <i>Graduate Teaching Assistant</i>	<i>Minneapolis, U.S.</i> <i>Jan 2025 – May 2026</i>
- Supported Data Science and AI Hub coursework by guiding 230+ students and 20+ teams through EDA, statistical modeling, and applied AI capstone projects. - Co-designed assessments and provided technical consultation on Python, R, machine learning, and Responsible AI, achieving a 100% project completion rate.	

SKILLS

Programming:	Python, SQL, R, Pandas, NumPy, Git
ML:	Scikit-learn, XGBoost, LightGBM, TensorFlow, Feature Engineering, Model Evaluation
Stats & Exp.:	A/B Testing, Hypothesis Testing, Causal Inference, Regression Analysis, Time-Series Forecasting, Anomaly Detection
Data Platforms:	PySpark, Spark ML, Databricks, BigQuery, AWS, Azure
Analytics/Viz:	Tableau, Power BI, Customer Segmentation, Funnel Analysis, Cohort Analysis, Data Storytelling

PROJECT EXPERIENCE

E-Commerce Product Analytics & Experimentation Platform	<i>Apr 2026 – May 2026</i>
- Built a BigQuery SQL and Python analytics pipeline on GA4-style e-commerce event data, engineering user-, session-, and item-level features for funnel analysis, cohort retention, and revenue behavior modeling. - Developed purchase propensity, customer segmentation, and A/B testing analyses using Scikit-learn, PR-AUC, lift, confidence intervals, and treatment-effect estimates to identify high-intent users and conversion opportunities.	
Scalable Grocery Reorder Prediction & Recommendation Engine	<i>Jun 2025 – Aug 2025</i>
- Built a PySpark + Databricks pipeline on 30M+ Instacart records, engineering leakage-safe user-product features and training Spark ML Gradient-Boosted Trees for next-basket reorder prediction. - Achieved 0.409 PR-AUC, 4x lift over baseline, and 58% Recall@10; added FP-Growth cross-sell rules and customer segmentation.	
Market Forecasting Pipeline with Automated Model Retraining	<i>Jan 2026 – Mar 2026</i>
- Built an automated Python forecasting pipeline to process 26+ years of global market index data, engineering lag, rolling-window, volatility, and momentum features for time-series prediction. - Trained and evaluated LSTM, tree-based, and statistical baseline models using TensorFlow, Scikit-learn, and AWS, with scheduled retraining workflows managed through GitHub Actions.
